Physics 122

Motion in 1D Review

1. Compare the distance covered for two cars, one traveling 30.6 m/s and the other 36.1 m/s, as they come to a stop under a constant acceleration of $-6.45\,\mathrm{m/s^2}$? (Hint: first use the definition of acceleration to find the stopping time for each car)

2. A car undergoes a constant acceleration from rest to 28 m/s in 9.5 s. What distance was covered in that time?

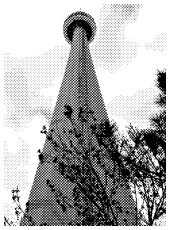
3. Not noticing a red light a drivers slams on the brakes squeeling to a halt in 3.75 s. Just before hitting the brakes the car was traveling 17 m/s and was 30 m from the light. **a)** What was the average acceleration of the car? **b)** Determine if the driver able to stop before reaching the traffic light by finding the distance required to stop.

4. An airplane lands with a speed of 70 m/s. After 3.5 s the airplane is traveling 17.5 m/s. **a)** What was the average acceleration of the airplane? **b)** What distance does the airplane need to stop?

5. During take off a Boeing 747 airplane accelerates at a constant $10.8\frac{m}{s^2}$. The airplane accelerated, from rest, for 7.8 s before it left the ground. **a)** With what speed did the airplane leave the ground? **b)** What distance was required for take-off?

6. A ball is thrown upwards, on the Earth ($a_{gravity} = -9.8\,\mathrm{m/s^2}$), with an initial speed of +17 m/s. **a)** How long will the ball be traveling upwards? **b)** How high up will the ball travel? **c)** What is the instantaneous velocity after 1.25 s? 2.25 s?

7. A loonie dropped from the observation deck on the CN Tower in Toronto takes 8.35 s to hit the ground. **a)** Assuming no air resistance, with what speed is the loonie striking the ground? **b)** How high is the observation deck from the ground?



8. During its fall to Earth, hail stones from cumulonimbus clouds reach a terminal velocity (a constant speed) because of air resistance. Assuming no air resistance, calculate at what speed a hail stone would strike the Earth if it continued to accelerate from gravity during its 20.2 s fall to the ground.

9. A ball is thrown straight up (assume no air resistance) at the surface of the Earth with $v_o = 25\,\text{m/s}$. How long will the ball be in the air?

10. The upward velocity of a cannon ball is initially 142 m/s. How long after the cannon ball is fired will it be 51.0 m above the ground?

11. What is the instantaneous velocity of a ball (launched upwards) that has a displacement of 21 m above the ground if the initial velocity was 32 m/s?

12. Use $d = v_o t + \frac{1}{2}at^2$ and $a = \frac{v_f - v_o}{t}$ to derived ${v_f}^2 = {v_o}^2 + 2ad$

Physics 122 Motion in 1D Review Mr. P. MacDonald 1/31/2010

Answer List

1. Slow car: $d = 72.6\,\text{m}$; Fast car: $d = 101\,\text{m}$
2. $d = 133\,\text{m}$
3. **a)** $a_{avg} = -4.5\,\text{m/s}^2$, **b)** No, 32 m is needed to stop.
4. **a)** $a_{avg} = -15\,\text{m/s}^2$, **b)** $d = 163\,\text{m}$
5. **a)** $v_f = 84\,\text{m/s}$, **b)** $d = 342\,\text{m}$
6. **a)** $t = 1.73\,\text{s}$, **b)** $d = 15\,\text{m}$, **c)** $v_{@1.25} = 4.75\,\text{m/s}$, $\text{v}_{@2.25} = -5.05\,\text{m/s}$
7. **a)** $v_f = 82\,\text{m/s}$, **b)**height $= 342\,\text{m}$
8. $v_f = 198\,\text{m/s}$
9. $t = 5.1\,\text{s}$
10. $t = 0.364$ and 28.6 seconds
11. $v = +25\,\text{m/s}$ or $-25m/s$
12.
