

Using Your Physics eBook

- Place the disc into your computer (Mac or PC - both are supported) and run the ebook program (you never know, it may work right away).
- During the startup process of the ebook you may be prompted to install Adobe Reader 4.0 (we currently use version 10).
 - Click "NO" as it more than likely will not install properly.
- The following worked for me:
 - Uninstall Adobe Reader from your computer
 - Place the ebook disc into the CD drive and run the ebook program.
 - The program should tell you it needs to install Adobe Reader 4, select "YES".
 - Note that will stop the ebook program.
 - Rerun the ebook program and it should work.
 - Then reinstall the latest Adobe Reader program from the web. The ebook should still work.
- The entire book should be there. You can create bookmarks to help you track your work.
