

Position-Time Graphs

Position-Time Graphs

Direction of Motion

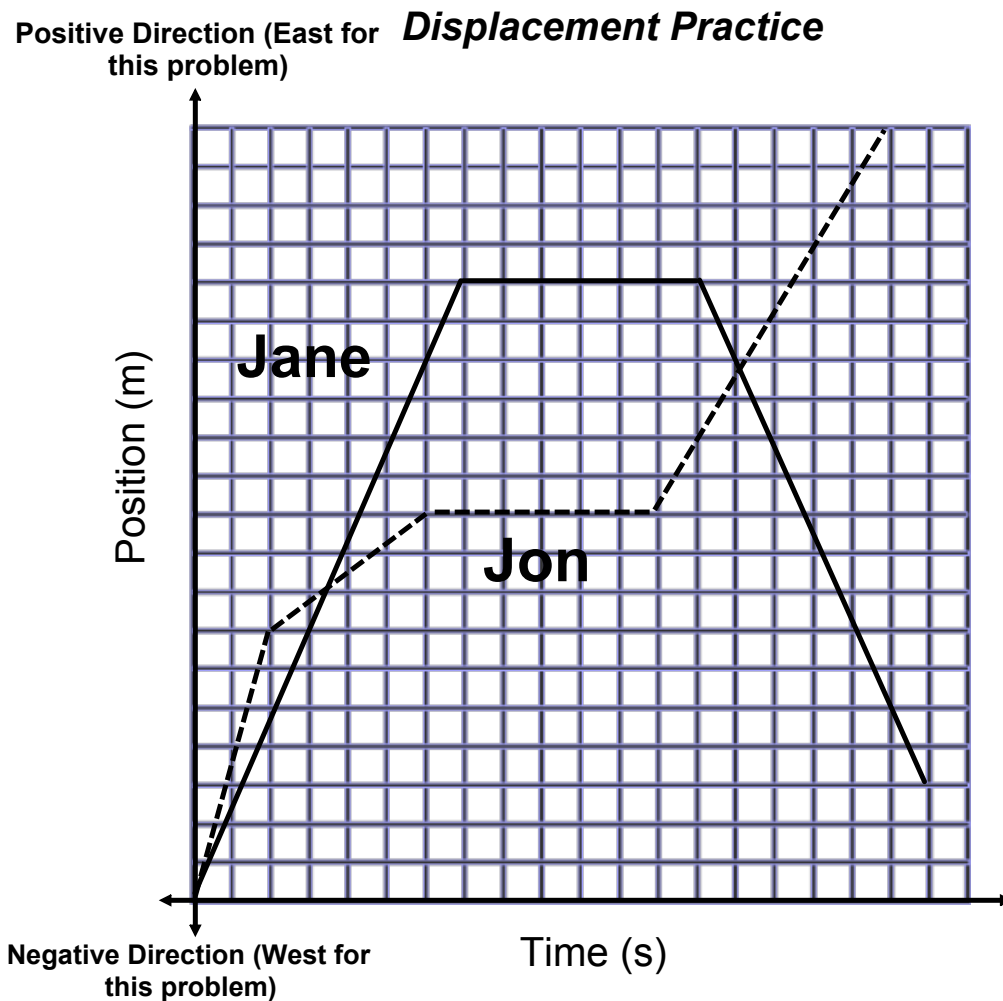

If the velocity of an object changes from positive to negative (or vice versa) it simply means that it has changed direction. On a position-time graph this occurs when the velocity changes signs.

Physics 112: Displacement and Velocity

D-T Graph Analysis

- a) What initial velocity did each person start off with? (Jane: 2.3 m/s [E]; Jon 3.5 m/s [E])
- b) What was the final velocity of each person? (Jane 2.2 m/s [W]; Jon 1.7 m/s [E])
- c) How long after the start did Jane start moving west? (13 seconds)
- d) At what time were both people at the same location? (14 seconds)
- e) What was the total distance traveled by each person? (Jane 29 m; Jon 20 m)
- f) What was the final displacement of each person? (Jane 3 m [E]; Jon 20 m [E])
- g) What was Jon's instantaneous speed at the 5.33 s mark? (0.75 m/s)
- h) What was each person's average velocity for the entire trip? (Jane: 0.0.16 m/s [E]; Jon: 1.1 m/s [E])
- i) What was each person's average speed for the entire trip? (Jane: 1.5 m/s; Jon: 1.1 m/s)
