

Examples

1. What is the observed frequency of a 525 Hz source moving towards a stationary observer at 75 m/s?

Take the speed of sound to be 375 m/s.

$$f_{\text{obs}} = ? \qquad f_{\text{obs}} = f_{\text{src}} \left(\frac{v_{\text{sound}} + v_{\text{obs}}}{v_{\text{sound}} - v_{\text{src}}} \right)$$

$$f_{\text{src}} = 525 \text{ Hz}$$

$$v_{\text{obs}} = 0 \text{ m/s}$$

$$v_{\text{src}} = 75 \text{ m/s}$$

$$v_{\text{sound}} = 375 \text{ m/s}$$

$$f_{\text{obs}} = 525 \left(\frac{375 + 0}{375 - 75} \right)$$

$$f_{\text{obs}} = 525 \left(\frac{375}{300} \right)$$

$$= 525 (1.25)$$

$$f_{\text{obs}} = 656 \text{ Hz}$$

2. A police siren has a frequency of 1.8×10^4 Hz. A crook in his getaway car drives away from the police at 105 m/s. What frequency is heard by the crook if the police car is driving at 85 m/s? The temperature today is 25°C .

$$f_{\text{obs}} = ?$$

$$f_{\text{src}} = 18000 \text{ Hz}$$

$$v_{\text{obs}} = 105 \text{ m/s}$$

$$v_{\text{src}} = 85 \text{ m/s}$$

$$\rightarrow v_{\text{sound}}$$

$$v_{\text{sound}} = 331 + 0.59 T_{\text{air}}$$

$$v_s = 331 + 0.59(25)$$

$$= 331 + 14.75$$

$$= \underline{\underline{345.75 \text{ m/s}}}$$

$$f_{\text{obs}} = f_{\text{src}} \left(\frac{v_s - v_{\text{obs}}}{v_s + v_{\text{src}}} \right)$$

$$f_{\text{obs}} = 18000 \left(\frac{345.75 - 105}{345.75 + 85} \right)$$

$$= 18000 \left(\frac{240.75}{430.75} \right)$$

$$= 18000 (0.5589)$$

$$\boxed{f_{\text{obs}} = 10060 \text{ Hz}}$$
