Below is an overview of what we will learn/review over the next few weeks. Over the next few weeks we will have a strong focus on logic flow and debugging when writing code.

1. Introduction to working with Visual Basic
    a. Buttons, textboxes and their properties.
    b. Basic inputting and outputting.
    c. Generating random numbers.
    d. Flow charts.
2. Variables
    a. Overview of the types of variables.
    b. Variable assignments.
    c. Examples and problems of each type.
3. If-then statements
4. Looping structures
