

Assignment #5 /15

Create a simple integer counter.

- The user will input an integer. One button will add the number in the textbox and the other button will subtract that number from the running total displayed in a label.
- Create a counter that counts how many times each button was clicked. Display the total in a label.
- Use labels as necessary to enhance your form.
- This continues until the user stops with a “quit” button.
- Comment your code.
- Make a flow chart.
