## SOLUTIONS $\Rightarrow$ PASCAL'S TRIANGLE

1. 1 7 21 35 35 21 7 1

- a) This is the seventh row. It can be identified because the second number in the row is the same as the row number.
- b) Next Row  $\rightarrow$  1 8 28 56 70 56 28 8 1

2. 1 10 45 120 310 252 210.

a) This is not an entire row since it is not symmetrical about the middle number. (It also does not end in 1.)

b) 1 10 45 120 310 252 210 120 45 10 1

c) Previous Row.

1 9 36 84 126 126 84 36 9 1

Next Row

1 11 55 165 330 462 462 330 165 55 11 1

③ a)  $i = 2$  (element)  $nC_{i-1}$   
 $n=6$  (row)  $6C_{2-1}$   
 $6C_1$

---

b)  $i = 5$  (element)  $nC_{i-1}$   
 $n=6$  (row)  $6C_{5-1}$   
 $6C_4$

6

15

3.a) 2<sup>nd</sup> element in row 6.

$$n=6 \quad i=2$$

$$\begin{aligned} & {}_n C_{i-1} \\ & = {}_6 C_{2-1} \\ & = {}_6 C_1 \\ & = 6 \end{aligned}$$

b) 5<sup>th</sup> element in row 6.

$$n=6 \quad i=5$$

$$\begin{aligned} & {}^n C_{i-1} \\ & = {}_6 C_{5-1} \\ & = {}_6 C_4 \\ & = 15 \end{aligned}$$

c) 1<sup>st</sup> 3 elements in row 11.

$$\begin{cases} n=11 \\ i=1 \end{cases}$$

$$\begin{aligned} & {}^n C_{i-1} \\ & = {}_{11} C_{1-1} \\ & = {}_{11} C_0 \\ & = 1 \end{aligned}$$

$$\begin{cases} n=11 \\ i=2 \end{cases}$$

$$\begin{aligned} & {}^n C_{i-1} \\ & = {}_{11} C_{2-1} \\ & = {}_{11} C_1 \\ & = 11 \end{aligned}$$

$$\begin{cases} n=11 \\ i=3 \end{cases}$$

$$\begin{aligned} & {}^n C_{i-1} \\ & = {}_{11} C_{3-1} \\ & = {}_{11} C_2 \\ & = 55 \end{aligned}$$

d)  $n$ th element in row 8.

$$n = 8 \quad i = 4$$

$$\begin{aligned} &= {}^n C_{i-1} \\ &= {}^8 C_{4-1} \\ &= {}^8 C_3 \\ &= 56 \end{aligned}$$

e) 60<sup>th</sup> element in row 60.

$$n = 60 \quad i = 60$$

$$\begin{aligned} &= {}^n C_{i-1} \\ &= {}^{60} C_{60-1} \\ &= {}^{60} C_{59} \\ &= 60 \end{aligned}$$

f) 8<sup>th</sup> element in row 10.

$$n=10 \quad i=8$$

$$\begin{aligned} & nC_{i-1} \\ & = 10C_{8-1} \\ & = 10C_7 \\ & = 120 \end{aligned}$$

g) 20<sup>th</sup> element of row 17.

$$n=17 \quad i=20$$

$$\begin{aligned} & nC_{i-1} \\ & = 17C_{20-1} \\ & = 17C_{19} \end{aligned}$$

↳ This is not possible!  
Row 17 only has 18 elements

4. In Pascal's Triangle, the values increase toward the middle of any row, where "r" approaches one-half of " $n$ ".
