

# Adding & Subtracting Radicals

- To add or subtract radicals, they must be **like radicals**. For radicals to be like radicals, they must have the same **radicand**!

For Example:

$$\begin{array}{cccc} \sqrt{2} & 6\sqrt{2} & -\sqrt{2} & \frac{1}{2}\sqrt{2} \\ \swarrow & \nearrow & \uparrow & \nearrow \\ \text{Like Radicands, therefore like radicals} \end{array}$$

$$\begin{array}{cccc} \sqrt{2} & 2\sqrt{4} & -2\sqrt{7} & -\frac{1}{2}\sqrt{11} \\ \swarrow & \nearrow & \uparrow & \nearrow \\ \text{Unlike Radicands, therefore unlike radicals} \end{array}$$

$$\begin{aligned}\#1 \quad & \textcircled{3}\sqrt{2} + \textcircled{5}\sqrt{2} \\ & = (3 + 5)\sqrt{2} \\ & = 8\sqrt{2}\end{aligned}$$

$$\begin{aligned}\#2 \quad & \textcircled{7}\sqrt{3} - \textcircled{4}\sqrt{3} \\ & = (7 - 4)\sqrt{3} \\ & = 3\sqrt{3}\end{aligned}$$

#3  $3\sqrt{2} - 2\sqrt{3} + 4\sqrt{2} + 5\sqrt{3}$

\*\* Group like radicals\*\*

$$= 7\sqrt{2} + 3\sqrt{3}$$

$$\#4 \quad 5\sqrt{8} - \sqrt{27} + \sqrt{50} - 2\sqrt{12}$$

$\begin{matrix} 4 \times 2 & 9 \times 3 & 25 \times 2 & 4 \times 3 \end{matrix}$

\*\* Simplify each into lowest terms\*\*

$$\begin{aligned}
 &= 5\sqrt{4 \times 2} - \sqrt{9 \times 3} + \sqrt{25 \times 2} - 2\sqrt{4 \times 3} \\
 &= (5 \times 2)\sqrt{2} - 3\sqrt{3} + 5\sqrt{2} - (2 \times 2)\sqrt{3} \\
 &= \underline{10\sqrt{2}} - \underline{3\sqrt{3}} + \underline{5\sqrt{2}} - \underline{4\sqrt{3}} \\
 &= 15\sqrt{2} - 7\sqrt{3}
 \end{aligned}$$
