

Solve the following system of equations:

Inconsistent System (planes do not intersect)

$$\begin{array}{l} \textcircled{1} 2x + y - 3z = -3 \\ \textcircled{2} x + 3y - 4z = 11 \\ \textcircled{3} x + 8y - 9z = 5 \end{array} \quad \begin{array}{l} 2x + y - 3z = -3 \\ (+) -2x - 6y + 8z = -22 \\ \hline \textcircled{4} -5y + 5z = -25 \end{array} \quad \begin{array}{l} x + 3y - 4z = 11 \\ (+) -x - 8y + 9z = -5 \\ \hline \textcircled{5} -5y + 5z = 6 \end{array}$$

$$\begin{array}{l} -5y + 5z = -25 \\ (+) \underline{5y - 5z = -6} \\ \hline 0 = -31 \end{array}$$

No Solution

Consistent System Dependent Solution
(planes intersect along a line)

$$\begin{array}{l}
 \textcircled{1} x + y + z = 3 \quad x + y + z = 3 \quad 4x + 2y + 8z = 16 \\
 \textcircled{2} 2x + y + 4z = 8 \quad \Leftrightarrow 2x + y + 4z = 8 \quad \Leftrightarrow x + 2y - z = 1 \\
 \textcircled{3} x + 2y - z = 1 \quad \boxed{\textcircled{4} -x - 3z = -5} \quad \boxed{\textcircled{5} 3x + 9z = 15}
 \end{array}$$

$$\begin{array}{l}
 -3x - 9z = -15 \quad \text{Infinite Solutions} \\
 \textcircled{4} \quad \underline{3x + 9z = 15} \\
 \quad \quad \quad 0 = 0
 \end{array}$$

$$\boxed{z = t}$$

$$\begin{array}{l}
 -x - 3(t) = -5 \quad x + y + z = 3 \\
 -x = 3t - 5 \quad (5 - 3t) + y + (t) = 3 \\
 x = -3t + 5 \quad \boxed{5 + y - 2t = 3} \\
 \boxed{x = 5 - 3t} \quad \boxed{y = 2t - 2}
 \end{array}$$

$$\boxed{(5 - 3t, 2t - 2, t)}$$

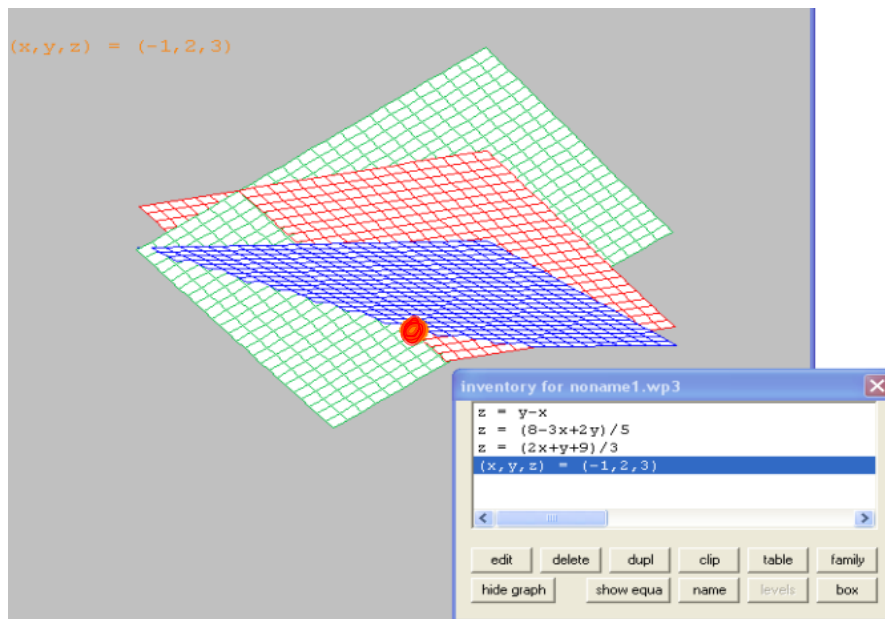

Write a general solution in terms of a parameter (i.e. $z = t$). For each value assigned to the parameter there will be one distinct solution.

Types of Systems

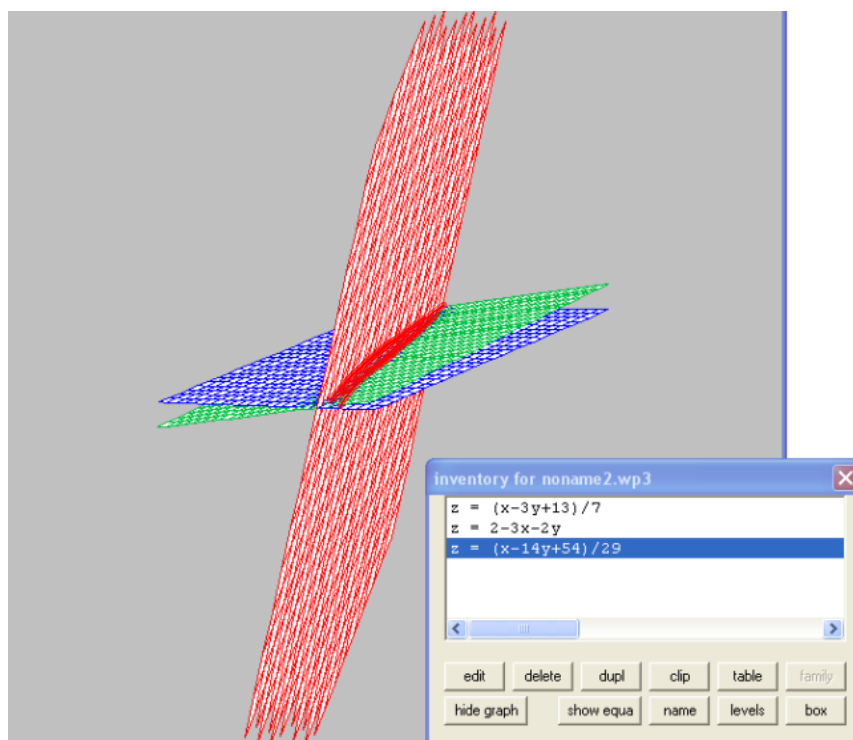

Remember: Looking at **intersecting planes**!

Consistent: At least one solution

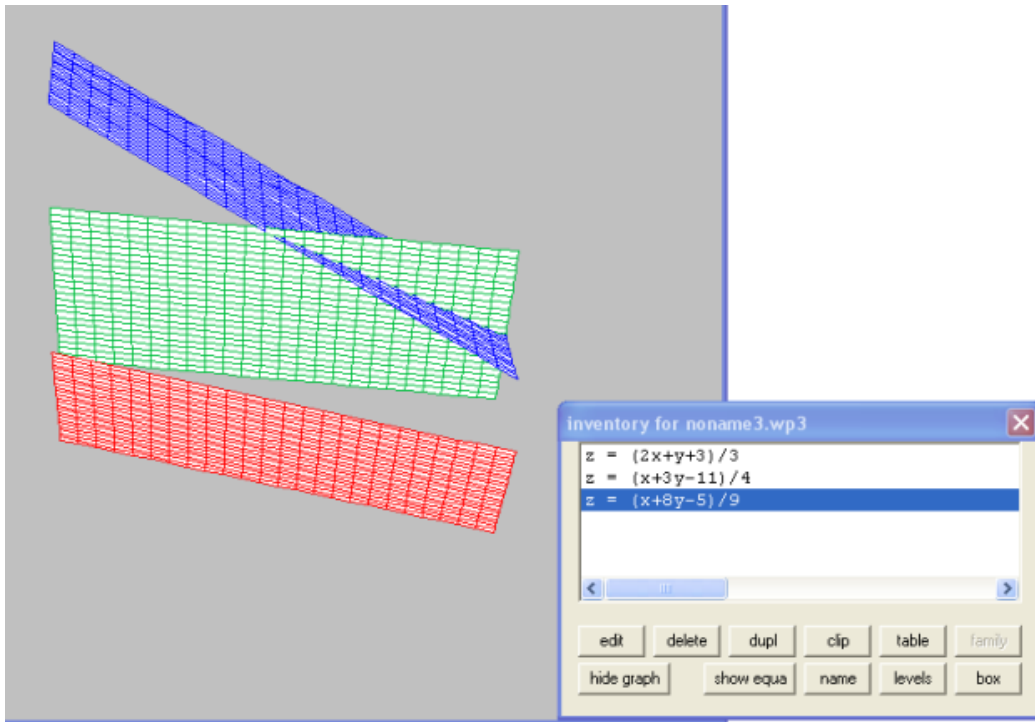

Independent: One Unique solution

Dependent: Infinite number of solutions

Inconsistent: No Solutions

3 Possible Orientations That Give No Solution...

More Word Problems

A hockey stick, gloves, and a helmet cost \$425. The stick costs twice as much as the gloves. The helmet costs \$25 more than the gloves. Find the cost of each

Let $x = (\text{\$})$ stick

$$x = 2y$$

Let $y = (\text{\$})$ gloves

$$z = y + 25$$

Let $z = (\text{\$})$ helmet

$$\textcircled{1} \quad x + y + z = 425$$

$$x + y + z = 425$$

$$\Leftrightarrow \frac{x - 2y}{0} = 0$$

$$\textcircled{2} \quad x - 2y = 0$$

$$\textcircled{4} \quad 3y + z = 425$$

$$\textcircled{3} \quad -y + z = 25$$

$$-y + z = 25$$

$$\Leftrightarrow \frac{3y + z = 425}{-4y = -400}$$

$$-4y = -400$$

$$y = \text{\$}100$$

$$-(100) + z = 25$$

$$z = \text{\$}125$$

$$x + y + z = 425$$

$$x + (100) + (125) = 425$$

$$x = \text{\$}200$$

∴ The stick costs \$200
 " gloves " \$100
 " helmet " \$125

An ipod, a docking station, and an itunes subscription costs \$825.
 The ipod costs \$150 more than the docking station. The station
 costs 4 times the amount of the subscription. Find the cost of each.

Let $x = \text{ipod} (\$)$

Let $y = \text{d.s.} (\$)$

Let $z = \text{itunes} (\$)$

$$\textcircled{1} \quad x + y + z = 825 \quad x + y + z = 825$$

$$\textcircled{2} \quad x - y = 150 \quad \Leftrightarrow \quad x - y = 150$$

$$\textcircled{3} \quad y - 4z = 0 \quad \textcircled{4} \quad 2y + z = 675$$

$$\begin{aligned} 2y - 8z &= 0 \\ \Leftrightarrow \quad 2y + z &= 675 \\ \hline -9z &= -675 \\ z &= 75 \end{aligned}$$

$$\begin{aligned} y - 4(75) &= 0 \\ y - 300 &= 0 \\ y &= 300 \end{aligned}$$

$$\begin{aligned} x - (300) &= 150 \\ x &= 450 \end{aligned}$$
