

# Absolute Value Functions

The absolute value represents its distance from zero on a number line.

The symbol for absolute value is:

" | | " .

Examples:

$$|4| = 4$$

$$|-4| = 4$$

$$|3.2| = 3.2$$

$$|-x| = \text{X}$$

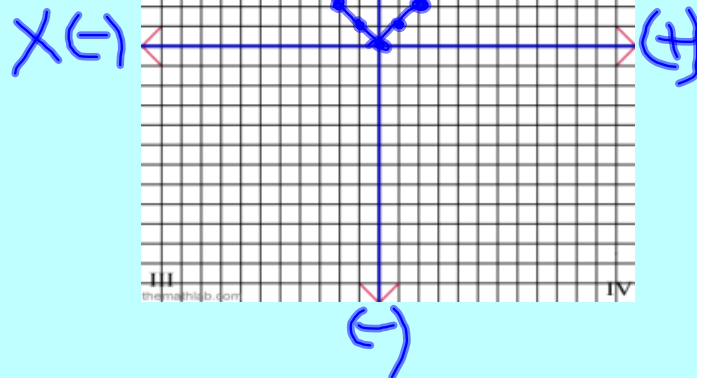

The absolute value is **always** the **positive** value!

# How do you graph an absolute value graph?

$$y = |x|$$

x	y
-2	2
-1	1
0	0
1	1
2	2

Over	Up
1	1
2	2
3	3

**What is a Vertex??**

- The vertex is where the graph changes direction.

**Vertex :**  $(0,0)$  **Dir:** Up

a)  $y = |x - 1| + 4$

x	y
-2	7
-1	6
0	5
1	4
2	5

Vertex: (1, 4)  
 Dir: up  
 $y = |2 - 1| + 4$   
 $= |1| + 4$   
 $= 1 + 4$   
 $= 5$

b)  $y = |x + 3| - 2$

x	y
-4	
-3	
-2	
-1	
0	
1	
2	

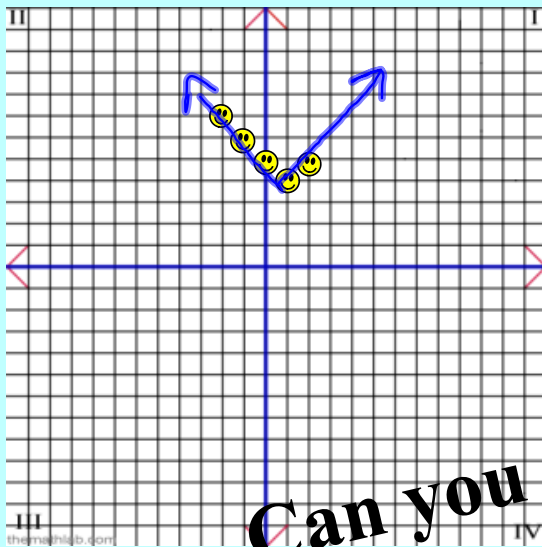

Vertex:  
 Dir:

$$y = |x - 1| + 4$$

x	y
-2	7
-1	6
0	5
1	4
2	5

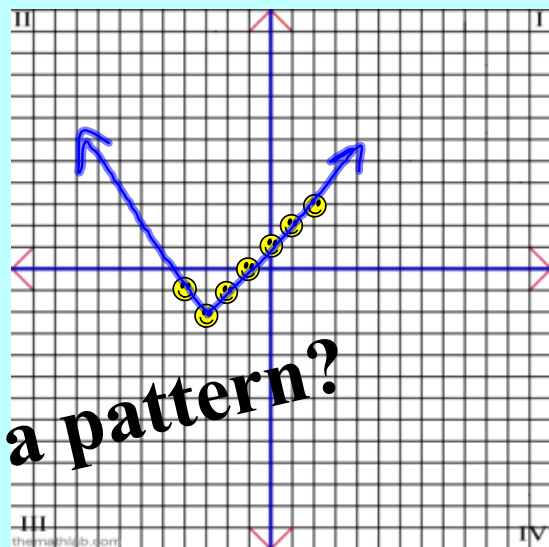

Vertex: (1,4)  
Dir: Up

$$y = |x + 3| - 2$$

x	y
-4	-1
-3	-2
-2	-1
-1	0
0	1
1	2
2	3

Vertex: (-3,-2)  
Dir: Up

Can you see a pattern?

$$y = -|x - 5| - 1$$

x	y
-2	
-1	
0	
1	
2	

Any predictions?

Over	Down
1	1
2	2
3	3

Vertex:  $(5, -1)$   
Dir: down

## Absolute Value Form

$$y = a |x + h| + k$$

Vertex:  $(-h, k)$

Stretch Factor:  $a$

What is the stretch factor???

- The stretch factor tells you whether the graph opens up or down. It also tells you how much to stretch the graph by.

a)  $y = |x - 1| + 4$

b)  $y = |x + 3| - 2$

Can you graph these without a table of values?

Vertex : (1, 4)  
Dir: Up

Vertex: (-3, -2)  
Dir: Up

State the **vertex** of each of the following absolute value functions, and if it will **open up or down**.

1.  $y = |x - 5| + 8$

2.  $y = -|x + 6| - 7$

3.  $y + 4 = |x - 9| + 8 - 4$   
 $y = |x - 9| + 4$
