Homework -

Chemical Reactions

IV. Single Replacement Reaction

Reaction of an element with a compound to produce a new element and an ionic compound.

- ⇒usually occurs in aqueous solution
- ⇒reaction will only occur if the element is replacing a less reactive element (see table 11.2)

$$\frac{\text{Cu}_{(s)}^{2+} + 2\text{AgNO}_{3(aq)}}{\text{compound}} \longrightarrow 2\text{Ag}_{(s)} + \frac{\text{Cu}(NO_3)_{2(q)}}{\text{compound}}$$

PB+CI-PbCI_{2(s)} MgSO4(a) KOH(a)

	Cu2+					
						NO3-
high (a)						al)
(s)						none

FORMATION.

elements ->> compound

DECOMPOSITION

Compound -> elements

COMBUSTION

element/compound + O2 -> most common oxides

SINGLE REPLACEMENT

element + compound -> element + Eompound

Chemical Reactions in Solution

Solution - homogeneous (uniform) mixture of a solute and a solvent.

⇒ solute - substance dissolved ⇒ solvent - substance doing dissolving (liquid)

If the amount of solute that can dissolve in a solvent is large, then the solute is said to have a *high solubility*.

If the amount of solute that can dissolve in a solvent is small, then the solute is said to have a *low solubility*.

Solid substances formed from reactions in solutions are known as **precipitates**.

Solubility Rules

- Group 1 Compounds have a high solubility
- Compounds containing ammonium (NH₄⁺) have a high solubility
- All acids have a high solubility
- Elements have a low solubility (except chlorine)
- Solubility varies for molecular compounds

Table 11.2							
Activity Series of Metals							
	Name	Symbol					
	Lithium	Li					
	Potassium	K					
	Calcium	Ca					
/ity	Sodium	Na					
ţ.	Magnesium	Mg					
Decreasing reactivity	Aluminum	Al					
ng	Zinc	Zn					
asi	Iron	Fe					
cre	Lead	Pb					
De	(Hydrogen)	(H)*					
₩	Copper	Cu					
	Mercury	Hg					
	Silver	Ag					

Practice Problems

$$Zn_{(s)}^{2+}$$
 NO_3^{-}
 $Zn_{(s)} + Pb(NO_3)_{2(aq)} \longrightarrow Pb_{(s)} + Zn(NO_3)_{2(aq)}$

$$F^ H^+$$
 $F_{2(g)}$ +2HCl_(aq) \longrightarrow Cl_{2(aq)} +2HF_(aq)

$$Al_{(s)} + CuSO_{4(aq)} \longrightarrow$$
