## Conjugate Acid-Base Pairs

**Acid-Base reactions are at equilibrium !**

*(Look at forward reaction and reverse reaction)*

- Every acid-base reaction at equilibrium has two acids and two bases.
- Acid on 'product' side is formed by addition of proton to base on 'reactant' side
- Base on 'product' side is formed by removal of a proton from acid on 'reactant' side

### Conjugate acid-base pair

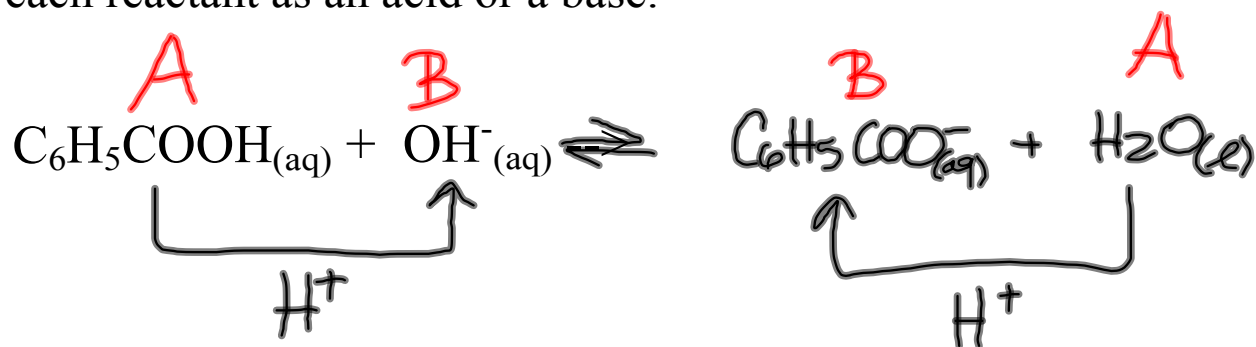

A pair of substances that differ by only a proton

Ex.

See Appendix F, p. 611

Predict the products for the following reaction, and identify each reactant as an acid or a base.
