

How am I doing?

1. What is the slope of the x-axis? ----- 0 $\frac{0}{1}$.
2. Perpendicular lines have opposite reciprocal slopes.
3. What is the slope perpendicular to the y-axis? 0 $\frac{0}{1}$.
4. Parallel lines have the same slope.
5. The slope of the y-axis is undefined (1/0).
6. The slope parallel to $-5/7$ is $-5/7$.
7. The slope perpendicular to $6/11$ is $-11/6$.
8. The slope parallel to the y-axis is undefined (1/0).
9. Calculate the slope of $(2, -5)$ $(3, 2)$. 7

$$\frac{2 + -5}{3 - 2} = \frac{7}{1}$$

To join the local gym. Karim pays a start-up fee of \$99.00, plus a monthly fee of \$29.00.

m =

b =

x =

y =

- a) Write an equation for the total cost, C dollars, for n months at the gym.
- b) Suppose Karim went to the gym for 23 months. What was the total cost?
- c) Suppose the total cost was \$505. For how many months did Karim use the gym?
- d) Could the total cost be exactly \$600? Justify your answer.

a) Write an equation for the total cost, C dollars, for n months at the gym.

b) Suppose Karim went to the gym for 23 months. What was the total cost?

c) Suppose the total cost was \$505. For how many months did Karim use the gym?

d) Could the total cost be exactly \$600? Justify your answer.

1. State the slope perpendicular to $y = -3/8x - 4$

$$\text{Slope} = -3/8 = \frac{8}{3}$$

2. State the slope parallel to $y = -7x + 3$

$$\text{Slope} = -7 = -7$$

3. State the slope perpendicular to $y = 6x + 2/3$

$$\text{Slope} = \frac{6}{1} = \frac{-1}{6}$$

4. State the slope perpendicular to $y = -8 - 4/5x$

$$\text{Slope} = -4/5 = \frac{+5}{4}$$
