

Warm Up

Math 112

Feb. 16 2012

#1) Find the midpoint between Q(18, -5) and R(-8, 7).

$$\begin{aligned} \text{Midpoint} &= \left[\frac{x_2 + x_1}{2}, \frac{y_2 + y_1}{2} \right] \\ &= \left[\frac{-8 + 18}{2}, \frac{7 + (-5)}{2} \right] \\ &= \left[\frac{10}{2}, \frac{2}{2} \right] \\ &= [5, 1] \end{aligned}$$

#2) The midpoint of FG is given by M(-3, 5) for the points F(-10, -2) and G(x, y). Find x and y.

$$\begin{aligned} \text{Mid} &= \left(\frac{x_2 + x_1}{2}, \frac{y_2 + y_1}{2} \right) \\ (-3, 5) &= \left(\frac{x + (-10)}{2}, \frac{y + (-2)}{2} \right) \end{aligned}$$

Annotations: 'x, y' above the second point; 'x, y' above the variables in the formula; 'x coord' and 'y coord' with arrows pointing to the x and y components of the midpoint (-3, 5).

Set the 'x' coordinates equal

$$-3 = \frac{(x-10)}{2}$$

Cross multiply and solve for x

$$1(x-10) = -3(2)$$

$$x-10 = -6$$

$$x-10 = -6^{+10}$$

$$\boxed{x = 4}$$

Set the 'y' coordinates equal

$$5 = \frac{(y-2)}{2}$$

$$1(y-2) = 5(2)$$

$$y-2 = 10$$

$$\boxed{y = 12}$$

$$(4, 12)$$
