

Warm Up

Put in standard form

$$\cancel{3} \cdot \frac{y+5}{\cancel{3}} = \overset{3}{\cos(2\theta + 90^\circ)} + 6 \cdot \overset{3}{}$$

$$y+5 = 3\cos[2(\theta+45^\circ)] + 18$$

$$y = \underline{3}\cos[\underline{2}(\underline{\theta+45^\circ})] + \underline{13}$$

$$a = 3$$

$$b = 2$$

$$c = -45^\circ$$

$$d = 13$$

$$P = \frac{360^\circ}{2} = 180^\circ$$

Develop an equation that corresponds to the graph

Hint: Draw sinusoidal axis first! $y = -2$

Look for a **sine** graph

$C = 0$

$y = 2 \sin[2(\theta - 0)] - 2$

$y = 2 \sin 2(\theta) - 2$

What about a **cosine** graph?

$C = -135^\circ$

$y = 2 \cos[2(\theta + 135^\circ)] - 2$

$d = -2$

$a = 2$

$P = 180^\circ$

$b = \frac{360^\circ}{180^\circ} = 2$

Determine a sine and a cosine equation for this graph

$$y = \sin \theta$$

$$c = -\frac{\pi}{2}$$

$$y = 3 \sin \left[1 \left(\theta + \frac{\pi}{2} \right) \right] + 1$$

$$y = \cos \theta$$

$$c = 0$$

$$y = 3 \cos [1(\theta - 0)] + 1$$

Write both a sine and cosine equation to describe the following graph:

Find four equations that match the graph:

Check with a calculator...
