#### Solve Problems Involving Exponential Equations With Different Bases

Christina plans to buy a car. She has saved \$5000. The car she wants costs \$5900. How long will Christina have to invest her money in a term deposit that pays 6.12% per year, compounded quarterly, before she has enough to buy the car?

#### Solution

The formula for compound interest is  $A = P(1 + i)^n$ , where A is the amount of money at the end of the investment; P is the principal amount deposited; i is the interest rate per compounding period, expressed as a decimal; and n is the number of compounding periods. In this problem:

= 0.0613.

$$A = 5900$$
  
 $P = 5000$   
 $i = 0.0612 \div 4 \text{ or } 0.0153$ 

Divide the interest rate by 4 because interest is paid quarterly or four times a year.

$$A = P(1+i)^{n}$$

$$\frac{5900}{5000} = \frac{5000}{5000} (1.0153)^{n}$$

$$1.18 = (1.0153)^{n}$$

$$(1.0153)^{0.9} = (1.0153)^{n}$$
\*Express 1.18 with a base of 1.0153  $\rightarrow \frac{\log 1.18}{\log 1.0153} = \frac{\log 9}{\log 1.0153}$ 

$$10.9 = n$$

$$n is the number of compound the number of years.
$$4 \cdot 10.9 = 4 = 3.73 \text{ years}$$$$

The number of milligrams of a drug remaining in the bloodstream t days after consumption is given by the equation:

$$D = 50(0.9)^t$$

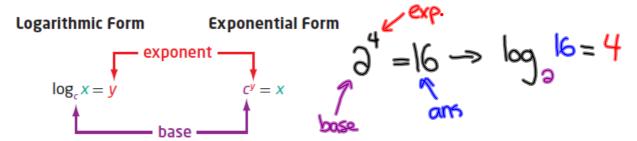

- (a) What percentage of the drug leaves the body each day? \_\_\_\_\_\_%
- (b) The drug can be detected in urine tests when 2 or more mg of the drug remain in the bloodstream. Will there be evidence of this drug in the bloodstream 28 days after consumption? Provide proof!

# **Understanding Logarithms**

#### Focus on...

- demonstrating that a logarithmic function is the inverse of an exponential function
- sketching the graph of  $y = \log_c x$ , c > 0,  $c \ne 1$
- determining the characteristics of the graph of  $y = \log_c x$ , c > 0,  $c \ne 1$
- · explaining the relationship between logarithms and exponents
- expressing a logarithmic function as an exponential function and vice versa
- · evaluating logarithms using a variety of methods

For the exponential function  $y = c^x$ , the inverse is  $x = c^y$ . This inverse is also a function and is called a **logarithmic function**. It is written as  $y = \log_c x$ , where c is a positive number other than 1.

Since our number system is based on powers of 10, logarithms with base 10 are widely used and are called common logarithms. When you write a common logarithm, you do not need to write the base. For example,  $\log 3$  means  $\log_{10} 3$ .

# logarithmic function

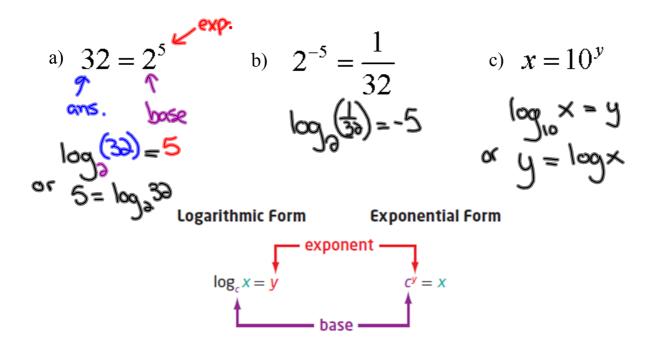

a function of the form y = log<sub>c</sub> x, where c > 0 and c ≠ 1, that is the inverse of the exponential function y = c<sup>x</sup>

#### logarithm

- an exponent
- in x = c<sup>y</sup>, y is called the logarithm to base c of x

#### common logarithm

 a logarithm with base 10 Write each of the following in logarithmic form

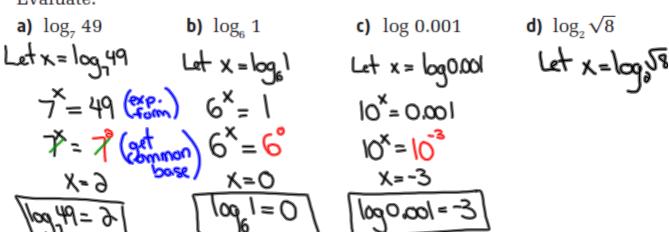

Write each of the following in exponential form

a) 
$$\log_4 16 = 2$$
 b)  $\log_2 \left(\frac{1}{32}\right) = -5$  c)  $\log 65 = 1.8129$  does  $3^5 = \frac{1}{39}$ 

## **Evaluating a Logarithm**

Evaluate.

## Determine an Unknown in an Expression in Logarithmic Form

Exponential Function Logarithmic Function

$$y = c^{x}$$
,  $c > 0$ ,  $c \neq 1$ 
 $y = \log_{c} x$ ,  $c > 0$ ,  $c \neq 1$ 
 $\sum_{i=1}^{n} \sum_{j=1}^{n} |y| \leq 1$ 

#### \_\_0

#### Graph the Inverse of an Exponential Function

- a) State the inverse of  $f(x) = 3^x$ .
- **b)** Sketch the graph of the inverse. Identify the following characteristics of the inverse graph:
  - · the domain and range
  - $\bullet$  the x-intercept, if it exists
  - the y-intercept, if it exists
  - · the equations of any asymptotes

#### Solution

- a) The inverse of  $y = f(x) = 3^x$  is or, expressed in logarithmic form, Since the inverse is a function, it can be written in function that  $y = \log_3 x$  is a function?
- **b)** Set up tables of values for both the exponential function, f(x), and its inverse,  $f^{-1}(x)$ . Plot the points and join them with a smooth curve.

$f(x) = 3^x$

The graph of the inverse,  $f^{-1}(x) = \log_3 x$ , is a reflection of the graph

of  $f(x) = 3^x$  about the line y = x. For  $f^{-1}(x) = \log_3 x$ ,

- the domain is and the range is
- the x-intercept is
- ullet there is no y-intercept
- the vertical asymptote, the axis, has equation there is no asymptote

How do the characteristics of  $f^{-1}(x) = \log_3 x$  compare to the characteristics of  $f(x) = 3^x$ ?

#### **Key Ideas**

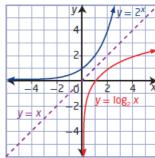

- A logarithm is an exponent.
- Equations in exponential form can be written in logarithmic form and vice versa.

Exponential Form Logarithmic Form  $x = c^y$   $y = \log_c x$ 

- The inverse of the exponential function  $y=c^x$ , c>0,  $c\neq 1$ , is  $x=c^y$  or, in logarithmic form,  $y=\log_c x$ . Conversely, the inverse of the logarithmic function  $y=\log_c x$ , c>0,  $c\neq 1$ , is  $x=\log_c y$  or, in exponential form,  $y=c^x$ .
- The graphs of an exponential function and its inverse logarithmic function are reflections of each other in the line y = x, as shown.
- For the logarithmic function  $y = \log_c x$ , c > 0,  $c \neq 1$ ,
  - the domain is  $\{x \mid x > 0, x \in R\}$
  - the range is  $\{y \mid y \in R\}$
  - the x-intercept is 1
  - the vertical asymptote is x = 0, or the y-axis
