

Warm Up

Name the following compounds:

diphosphorous
tetrafluoride

dinitrogen
monoxide

Sodium sulfide

ammonium nitrate

Worksheet
p. 270 #20-25

Molecular Models

What are the three-dimensional structures of the molecular substances: water (H_2O), hydrogen peroxide (H_2O_2), hydrogen sulfide (H_2S), methane (CH_4), methanol (CH_3OH), ethanol ($\text{C}_2\text{H}_5\text{OH}$), propane (C_3H_8), ammonia (NH_3), chlorine and sulfur (cyclooctasulfur)?

water	H_2O	

Naming and Writing Formulas for Acids and Bases

Reminder:

Acids are aqueous hydrogen compounds that turn blue litmus red.

Bases are aqueous solutions of ionic hydroxides that turn red litmus blue.

IDENTIFYING ACIDS AND BASES FROM FORMULA'S

Most acid can be identified from **starting with H** or ending in **COOH**.

i.e. HCl , H_2SO_4 , CH_3COOH

Note: NH_3 and CH_4 are not acids!

Most bases can be identified from ending in **-OH**

Bases are named using the rules for naming ionic compounds.

Ex. NaOH sodium hydroxide

When naming acids, common names (for common acids) or IUPAC names can be used.

Classical Acid Names

- used the suffix **-ic** Ex. sulfuric
- used hydro and the suffix **-ic** Ex. hydrochloric
- used suffix **-ous** Ex. sulfurous
- and others (see inside back cover)

IUPAC (modern) Acid Names

- name the acid as an aqueous hydrogen compound
- Ex. aqueous hydrogen sulfide - $\text{H}_2\text{S}_{(\text{aq})}$

Rules for Naming Acids

1. If anion ends in -ide, the acid is "hydro _____ ic acid"

Ex. HCl

aqueous hydrogen chloride
hydrochloric acid

2. If anion ends in -ate, the acid is " _____ ic acid"

Ex. H₂SO₄

Sulfuric acid
aqueous hydrogen sulfate

3. If anion ends in -ite, the acid is " _____ ous acid"

Ex. H₂SO₃

Sulfurous acid
aqueous hydrogen sulfite
