

1. a) Hailee charges \$12.00 for a 12" homemade pizza. It costs her \$6.50 to prepare the pizza, by what percentage did she mark up the price? (% markup)
- b) Hailee wants to make \$6.50 on every 15" pizza she sells. If it costs her \$7.00 to make, by what percentage will she mark up the price?

a)

$$\frac{12}{6.50 \text{ (org.)}} = 1.85 \quad 85\%$$

12-6.50

$$\frac{5.50}{6.50 \text{ (org.)}} = 0.85 \quad 85\%$$

b)

$$\frac{6.50}{7.00} = 0.928 = 93\%$$

2. iTunes had a sale on downloading music. You could purchase 20 songs from the top 100 list for \$15.00. How much would you be paying for one song with this deal?(Unit Price)

$$\begin{array}{r} \text{Price} \\ \hline \text{Unit} \\ \\ \hline 15.00 \\ 20 \\ \hline = \$0.75 / \text{song} \end{array}$$

3. A lawnmower's engine uses a mixture of 5 L of gas and 0.5L of oil. How much oil must you mix with 2L of gas to refuel the lawnmower? (proportion/ratios)

Gas  
Oil

Let  $x = \text{oil}$

$$\frac{5}{0.5} = \frac{2}{x}$$

$$\frac{5x}{5} = \frac{1}{5}$$

$$x = 0.2 \text{ L of oil}$$

4. If the ratio of loaves of white bread sold compared to loaves of whole wheat bread sold is 3:1 and a bakery sells 100 loaves of whole wheat bread in a day, how many loaves of white bread would it sell in a day?  
(ratio/ proportion)

White  
Whole wheat

$$\frac{3}{1} = \frac{x}{100}$$

$$x = 300 \text{ white bread}$$

5. a) If you have 5200 pesos, how many Canadian dollars can you exchange them for? (currency exchange)

**Bank Buying Rate = 0.083443**  
**Bank Selling Rate = 0.108443**

$$\begin{aligned} a) \quad & \frac{1}{\text{rate}} = \frac{\text{For.}}{\text{Can.}} \\ & \frac{1}{0.083443} = \frac{5200}{X} \\ & X = 433.90 \end{aligned}$$

6. The price of a new HD-PVR is \$600.00.

- a) How much would a customer pay in Nova Scotia, where they are taxed 15%?
- b) How much would a customer pay in New Brunswick, where they are taxed 13%?
- c) How much do you save buying it in New Brunswick?
- d) What would be the difference between buying it in PEI instead of Nova Scotia?

$$\begin{array}{r} a) \quad 600 \\ \times 1.15 \\ \hline = \$690 \end{array}$$

$$\begin{array}{r} b) \quad 600 \\ \times 1.13 \\ \hline = 678 \end{array}$$

$$(c) \quad \$18$$

$$\begin{array}{r} (d) \quad 600 \\ \times 1.05 \quad \$3.00 \\ \hline 636 \\ \times 1.10 \\ \hline = 693.00 \end{array}$$

7. Troy sells hockey equipment. He is offering a sale of 30% off all items in the store. Helmets regularly sell for \$29.99 each, shoulder pads for \$39.99, and hockey sticks for \$79.95 each.

How much will it cost to buy 5 helmets, 4 sets of shoulder pads, and 6 hockey sticks?

$$\begin{aligned} \text{Helmet} &\rightarrow 29.99 \times 0.70 = 20.99 \\ &20.99 \times 5 = \$104.95 \end{aligned}$$

$$\begin{aligned} \text{Shoulder pads} &\rightarrow 39.99 \times 0.70 = 27.99 \\ &27.99 \times 4 = \$111.96 \end{aligned}$$

$$\begin{aligned} \text{Hockey Sticks} &\rightarrow 79.95 \times 0.70 = \$55.97 \\ &55.97 \times 6 = \$335.79 \end{aligned}$$

$$\begin{array}{r} 104.95 \\ + 111.96 \\ \hline 335.79 \\ \hline \$ 552.70 \end{array}$$

### Recipe #1

3 cups of concentrate  
7 cups of water

You only want to make 8 cups of Recipe #1. How many cups of concentrate and how many cups of water will you need? Explain your solution.

- **This is a question dealing with totals!!!!!!**
- **We will determine the total of the batch & set up a total ratio.**

### Batch Total

# of concentrate = 3  
# of water = 7

**Total # = 10**

Recipe #1

3 cups of concentrate  
7 cups of water

You only want to make 8 cups of Recipe #1. How many cups of concentrate and how many cups of water will you need? Explain your solution.

**Batch Total**

$$\begin{aligned} \# \text{ of concentrate} &= 3 \\ \# \text{ of water} &= 7 \end{aligned}$$

**Total # = 10**

**Total Ratio**

Let  $x$  = concentrate

$$\frac{\# \text{ of concentrate}}{\text{Total}}$$

$$\frac{3}{10} = \frac{x}{8}$$

→  $10x = 24$

→  $x = 2.4$

Recipe #1

3 cups of concentrate  
7 cups of water

You only want to make 8 cups of Recipe #1. How many cups of concentrate and how many cups of water will you need? Explain your solution.

**Batch Total**

# of concentrate = 3  
# of water = 7

**Total # = 10**

**Total Ratio**

Let  $x$  = concentrate

**# of concentrate**  
**Total**

$$\frac{3}{10} = \frac{x}{8}$$

$$10x = 24$$

$$x = 2.4$$

**2.4 Cups of Concentrate**

**Water = Total # - Concentrate**

$$\text{Water} = 8 - 2.4$$

$$\text{Water} = 5.6$$
