

## Questions from Homework

⑦ If  $h(x) = f(g(x))$ , determine  $g(x)$

a)  $h(x) = (2x-5)^2$  and  $f(x) = x^2$

$$g(x) = 2x-5$$

b)  $h(x) = (5x+1)^2 - (5x+1)$  and  $f(x) = x^2 - x$

$$g(x) = 5x+1$$

⑨  $j(x) = x^2$  and  $k(x) = x^3$

$$k(j(x)) = k(x^2) = (x^2)^3 = x^6$$

$$j(k(x)) = j(x^3) = (x^3)^2 = x^6$$

Yes

⑩  $s(x) = x^2 + 1$  and  $t(x) = x - 3$

$$s(t(x)) = s(x-3) = (x-3)^2 + 1 = \underline{x^2 - 6x + 10}$$

$$t(s(x)) = t(x^2+1) = (x^2+1) - 3 = \underline{x^2 - 2}$$

No

# Function Operations

To combine two functions,  $f(x)$  and  $g(x)$ , add or subtract as follows:

*Sum of Functions*

$$h(x) = f(x) + g(x)$$

$$h(x) = (f + g)(x)$$

*Difference of Functions*

$$h(x) = f(x) - g(x)$$

$$h(x) = (f - g)(x)$$

## Key Ideas

- You can add two functions,  $f(x)$  and  $g(x)$ , to form the combined function  $h(x) = (f + g)(x)$ .
- You can subtract two functions,  $f(x)$  and  $g(x)$ , to form the combined function  $h(x) = (f - g)(x)$ .
- \* The domain of the combined function formed by the sum or difference of two functions is the domain common to the individual functions. For example,
 

Domain of  $f(x)$ :  $\{x \mid x \leq 3, x \in \mathbb{R}\}$

Domain of  $g(x)$ :  $\{x \mid x \geq -5, x \in \mathbb{R}\}$

Domain of  $h(x)$ :  $\{x \mid -5 \leq x \leq 3, x \in \mathbb{R}\}$

- The range of a combined function can be determined using its graph.
- To sketch the graph of a sum or difference of two functions given their graphs, add or subtract the y-coordinates at each point.

1. Consider the graphs of the functions  $f(x)$ ,  $g(x)$ , and  $h(x)$ .

- a) Copy the table and use the graph of each function to complete the columns.

$x$	$f(x)$	$g(x)$	$h(x)$
-2			
-1			
0			
1			
2			
3			
4			

- b) What do you notice about the relationship between each value of  $h(x)$  and the corresponding values of  $f(x)$  and  $g(x)$ ?

### Example 1

#### Determine the Sum of Two Functions

Consider the functions  $f(x) = 2x + 1$  and  $g(x) = x^2$ .

- Determine the equation of the function  $h(x) = (f + g)(x)$ .
- Sketch the graphs of  $f(x)$ ,  $g(x)$ , and  $h(x)$  on the same set of coordinate axes.
- State the domain and range of  $h(x)$ .
- Determine the values of  $f(x)$ ,  $g(x)$ , and  $h(x)$  when  $x = 4$ .

$$\begin{aligned} a) \quad h(x) &= f(x) + g(x) \\ &= 2x + 1 + x^2 \\ &= x^2 + 2x + 1 \end{aligned}$$

$$\begin{aligned} f(x) &= 2x + 1 \\ D: \{x | x \in \mathbb{R}\} \end{aligned}$$

$$\begin{aligned} g(x) &= x^2 \\ D: \{x | x \in \mathbb{R}\} \end{aligned}$$

$$\begin{aligned} h(x) &= x^2 + 2x + 1 \\ D: \{x | x \in \mathbb{R}\} \end{aligned}$$

#### b) Method 1: Use Paper and Pencil

x	$f(x) = 2x + 1$	$g(x) = x^2$	$h(x) = x^2 + 2x + 1$
-2	-3	4	1
-1	-1	1	0
0	1	0	1
1	3	1	4
2	5	4	9

How could you use the values in the columns for  $f(x)$  and  $g(x)$  to determine the values in the column for  $h(x)$ ?

How are the y-coordinates of points on the graph of  $h(x)$  related to those on the graphs of  $f(x)$  and  $g(x)$ ?

How are the  $y$ -coordinates of points on the graph of  $h(x)$  related to those on the graphs of  $f(x)$  and  $g(x)$ ?

- c) The function  $f(x) = 2x + 1$  has domain  $\{x \mid x \in \mathbb{R}\}$ .  
 The function  $g(x) = x^2$  has domain  $\{x \mid x \in \mathbb{R}\}$ .  
 The function  $h(x) = (f + g)(x)$  has domain  $\{x \mid x \in \mathbb{R}\}$ , which consists of all values that are in both the domain of  $f(x)$  and the domain of  $g(x)$ .  
 The range of  $h(x)$  is  $\{y \mid y \geq 0, y \in \mathbb{R}\}$ .

- d) Substitute  $x = 4$  into  $f(x)$ ,  $g(x)$ , and  $h(x)$ .

$$\begin{array}{lll}
 f(x) = 2x + 1 & g(x) = x^2 & h(x) = x^2 + 2x + 1 \\
 f(4) = 2(4) + 1 & g(4) = 4^2 & h(4) = 4^2 + 2(4) + 1 \\
 f(4) = 8 + 1 & g(4) = 16 & h(4) = 16 + 8 + 1 \\
 f(4) = 9 & & h(4) = 25
 \end{array}$$

### Example 2

#### Determine the Difference of Two Functions

Consider the functions  $f(x) = \sqrt{x-1}$  and  $g(x) = x - 2$ .

- Determine the equation of the function  $h(x) = (f - g)(x)$ .
- Sketch the graphs of  $f(x)$ ,  $g(x)$ , and  $h(x)$  on the same set of coordinate axes.
- State the domain of  $h(x)$ .
- Use the graph to approximate the range of  $h(x)$ .

$$\begin{aligned} a) \quad h(x) &= f(x) - g(x) \\ &= \sqrt{x-1} - (x-2) \\ &= \sqrt{x-1} - x + 2 \end{aligned}$$

$$\begin{aligned} f(x) &= \sqrt{x-1} \\ \rightarrow x-1 &\geq 0 \rightarrow x \geq 1 \\ D: \{x \mid x \geq 1, x \in \mathbb{R}\} \end{aligned}$$

$$\begin{aligned} g(x) &= x-2 \\ D: \{x \mid x \in \mathbb{R}\} \end{aligned}$$

$$\begin{aligned} h(x) &= \sqrt{x-1} - x + 2 \\ D: \{x \geq 1, x \in \mathbb{R}\} \end{aligned}$$

#### b) Method 1: Use Paper and Pencil

For the function  $f(x) = \sqrt{x-1}$ , the value of the radicand must be greater than or equal to zero:  $x - 1 \geq 0$  or  $x \geq 1$ .

$x$	$f(x) = \sqrt{x-1}$	$g(x) = x - 2$	$h(x) = \sqrt{x-1} - x + 2$
-2	undefined	-4	undefined
-1	undefined	-3	undefined
0	undefined	-2	undefined
1	0	-1	1
2	1	0	1
5	2	3	-1
10	3	8	-5

Why is the function  $h(x)$  undefined when  $x < 1$ ?

How could you use the values in the columns for  $f(x)$  and  $g(x)$  to determine the values in the column for  $h(x)$ ?

How could you use the y-coordinates of points on the graphs of  $f(x)$  and  $g(x)$  to create the graph of  $h(x)$ ?

How could you use the y-coordinates of points on the graphs of  $f(x)$  and  $g(x)$  to create the graph of  $h(x)$ ?

- c) The function  $f(x) = \sqrt{x - 1}$  has domain  $\{x \mid x \geq 1, x \in \mathbb{R}\}$ .  
 The function  $g(x) = x - 2$  has domain  $\{x \mid x \in \mathbb{R}\}$ .  
 The function  $h(x) = (f - g)(x)$  has domain  $\{x \mid x \geq 1, x \in \mathbb{R}\}$ , which consists of all values that are in both the domain of  $f(x)$  and the domain of  $g(x)$ .

What values of  $x$  belong to the domains of both  $f(x)$  and  $g(x)$ ?

- d) From the graph, the range of  $h(x)$  appears to be approximately  $\{y \mid y \leq 1.2, y \in \mathbb{R}\}$ .

How can you use a graphing calculator to verify the range?

## Homework

finish #1-11 on page 483-484

**10.1 Sums and Differences of Functions,  
pages 483 to 487**

1. a)  $h(x) = |x - 3| + 4$       b)  $h(x) = 2x - 3$   
     c)  $h(x) = 2x^2 + 3x + 2$     d)  $h(x) = x^2 + 5x + 4$
2. a)  $h(x) = 5x + 2$               b)  $h(x) = -3x^2 - 4x + 9$   
     c)  $h(x) = -x^2 - 3x + 12$     d)  $h(x) = \cos x - 4$
3. a)  $h(x) = x^2 - 6x + 1; h(2) = -7$   
     b)  $m(x) = -x^2 - 6x + 1; m(1) = -6$   
     c)  $p(x) = x^2 + 6x - 1; p(1) = 6$
4. a)  $y = 3x^2 + 2 + \sqrt{x + 4};$  domain  $\{x \mid x \geq -4, x \in \mathbb{R}\}$   
     b)  $y = 4x - 2 - \sqrt{x + 4};$  domain  $\{x \mid x \geq -4, x \in \mathbb{R}\}$   
     c)  $y = \sqrt{x + 4} - 4x + 2;$  domain  $\{x \mid x \geq -4, x \in \mathbb{R}\}$   
     d)  $y = 3x^2 + 4x;$  domain  $\{x \mid x \in \mathbb{R}\}$

6. a) 8                      b) 6                      c) 7  
     d) not in the domain
7. a) B                    b) C                    c) A

- |                            |                            |
|----------------------------|----------------------------|
| 9. a) $y = 3x^2 + 11x + 1$ | b) $y = 3x^2 - 3x + 3$     |
| c) $y = 3x^2 + 3x + 1$     | d) $y = 3x^2 - 11x + 3$    |
| 10. a) $g(x) = x^2$        | b) $g(x) = \sqrt{x+7}$     |
| c) $g(x) = -3x + 1$        | d) $g(x) = 3x^2 - x - 4$   |
| 11. a) $g(x) = x^2 - 1$    | b) $g(x) = -\sqrt{x-4}$    |
| c) $g(x) = 8x - 9$         | d) $g(x) = 2x^2 - 11x - 6$ |
