

Rules for Graphing Inequalities

- 1) When using \leq or \geq mark a **closed dot** on the number line.
- 2) When using $<$ or $>$ mark an **open dot** on the number line.
- 3) Shade in the direction the arrow is pointing.
- 4) If you *divide* or *multiply* by a **negative number**, you must **flip the sign**.

Examples...

1. $3x + 7 < 22 - 7$
 $\frac{3x}{3} < \frac{15}{3}$
 $x < 5$

2. $4(x - 3) \leq 12$

$4x - 12 \leq 12 + 12$

$\frac{4x}{4} \leq \frac{24}{4}$

$x \leq 6$

$$3. \quad 2(-3x - 8) > 4(-2x - 1)$$

$$-6x - 16 > -8x - 4$$

$$-6x + 8x > -4 + 16$$

$x = \#$

$$\frac{2x}{2} > \frac{12}{2}$$

$$x > 6$$

4. $-3(x - 2) < 24$

$-3x + 6 < 24 - 6$

$\frac{-3x}{-3} < \frac{18}{-3}$

$x > -6$

5. $\frac{x}{-2} + 3 \leq 6$

$x - 6 \geq -12 + 6$

$x \geq -6$

6.

$$7x - 6(x - 2) \leq 27 + 4x$$

$$\underline{7x} - \underline{6x} + 12 \leq 27 + 4x$$

$$1x + 12 \leq 27 + 4x$$

 $x = \#$

$$1x - 4x \leq 27 - 12$$

$$\underline{-3x} \leq \underline{15}$$

$$x \geq -5$$

7. $\frac{1}{4}(4x - 2) \leq \frac{3}{2}(x + 1)$

$1(4x - 2) < \frac{12}{2}(x + 1)$

$4x - 2 < 6(x + 1)$

$4x - 2 < 6x + 6$

$4x - 6x < 6 + 2$

$-2x < 8$

$\frac{-2x}{-2} > \frac{8}{-2}$

Be Very Careful !!

The Ultimate !!

$$\frac{-2}{3}(x-5) + \frac{1}{2}(x+7) \geq 10$$
