

**State the Rule :)**

**State the Rule :)**

State the Rule :)

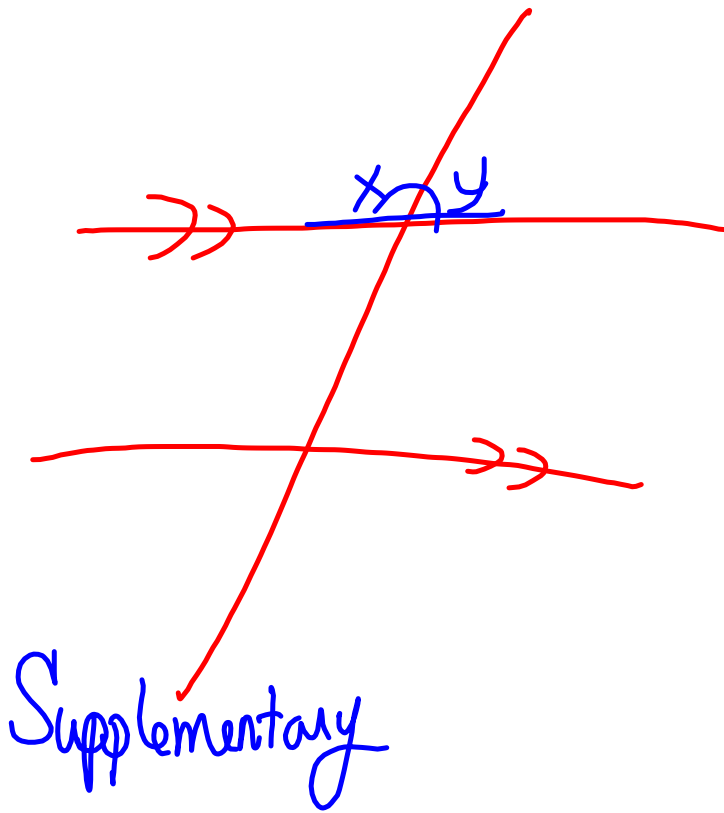

$$180 - 132 = 48^\circ$$

$$x = 26$$

$$180 - 52 = 128^\circ$$

State the rule, then solve for x.

State the rule, then solve for x.

Check  
 $3(8) + 18$   
 $24 + 18$   
 $= 42$

$3x + 18$        $5x + 2$

$3x + 18 = 5x + 2 - 18$

$3x - 5x = 2 - 18$

$\frac{-2x}{2} = \frac{-16}{2}$

$x = 8$

Check  
 $5(8) + 2$   
 $40 + 2$   
 $= 42$

check

$9(10) + 44 = 134$

$4(10) + 6 = 46$

$9x + 44$

$4x + 6$

$9x + 44 + 4x + 6 = 180$

$13x + 50 = 180 - 50$

$\frac{13x}{13} = \frac{130}{13}$

$x = 10$

State the rule, then solve for x.
