Example 1

Compare Graphs of a Linear Function and the Square Root of the Function

- a) Given $f(x) = 3 - 2x$, graph the functions $y = f(x)$ and $y = \sqrt{f(x)}$.
 b) Compare the two functions.

Use a table of values to graph $y = 3 - 2x$ and $y = \sqrt{3 - 2x}$.

x	$y = 3 - 2x$	$y = \sqrt{3 - 2x}$
-2	7	$\sqrt{7} = 2.7$
-1	5	$\sqrt{5} = 2.2$
0	3	$\sqrt{3} = 1.7$
1	1	$\sqrt{1} = 1$
1.5	0	$\sqrt{0} = 0$

Invariant points are
 $(1, 1)$ and $(1.5, 0)$

$$y = 3 - 2x:$$

$$D: \{x \mid x \in \mathbb{R}\} \text{ or } (-\infty, \infty)$$

$$R: \{y \mid y \in \mathbb{R}\} \text{ or } (-\infty, \infty)$$

$$y = \sqrt{3 - 2x}$$

$$D: \{x \mid x \leq 1.5, x \in \mathbb{R}\} \text{ or } (-\infty, 1.5]$$

$$R: \{y \mid y \geq 0, y \in \mathbb{R}\} \text{ or } [0, \infty)$$

b) Compare the graphs.

Why is the graph of $y = \sqrt{f(x)}$ above the graph of $y = f(x)$ for values of y between 0 and 1? Will this always be true?

For $y = f(x)$, the domain is $\{x \mid x \in \mathbb{R}\}$ and the range is $\{y \mid y \in \mathbb{R}\}$.

For $y = \sqrt{f(x)}$, the domain is $\{x \mid x \leq 1.5, x \in \mathbb{R}\}$ and the range is $\{y \mid y \geq 0, y \in \mathbb{R}\}$.

Invariant points occur at $(1, 1)$ and $(1.5, 0)$.

How does the domain of the graph of $y = \sqrt{f(x)}$ relate to the restrictions on the variable in the radicand? How could you determine the domain algebraically?

Relative Locations of $y = f(x)$ and $y = \sqrt{f(x)}$

The domain of $y = \sqrt{f(x)}$ consists only of the values in the domain of $f(x)$ for which $f(x) \geq 0$.

Value of $f(x)$	$f(x) < 0$	$f(x) = 0$	$0 < f(x) < 1$	$f(x) = 1$	$f(x) > 1$
Relative Location of Graph of $y = \sqrt{f(x)}$	The graph of $y = \sqrt{f(x)}$ is undefined.	The graphs of $y = \sqrt{f(x)}$ and $y = f(x)$ intersect on the x-axis.
