

Chapter 7: Right Triangles & Trigonometry

Parts of a Triangle:

Pythagorean Theorem

Longest Side (Hypotenuse)

$$c^2 = a^2 + b^2$$

Short Side (Leg)

$$a^2 = c^2 - b^2$$

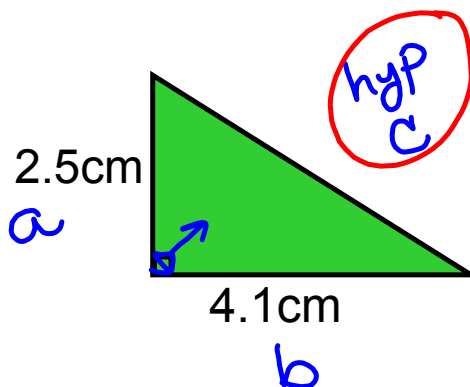

C = Hypotenuse

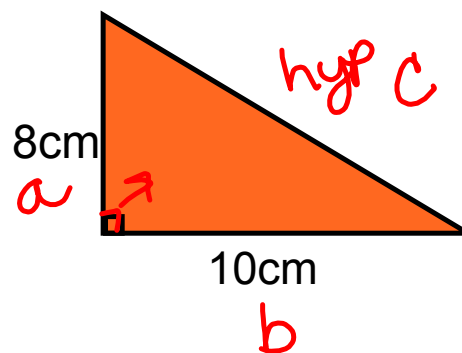

Determine the unknown length.

$$\begin{aligned}
 c^2 &= a^2 + b^2 \\
 c^2 &= 2.5^2 + 4.1^2 \\
 c^2 &= 6.25 + 16.81 \\
 \sqrt{c^2} &= \sqrt{23.06} \\
 c &= 4.8
 \end{aligned}$$

$$\begin{aligned}
 a^2 + b^2 &= c^2 \\
 8^2 + 10^2 &= c^2 \\
 64 + 100 &= c^2 \\
 \sqrt{164} &= \sqrt{c^2} \\
 c &= 12.8
 \end{aligned}$$

Determine the unknown length.

$$c^2 = a^2 + b^2$$

$$c^2 = 2.5^2 + 4.1^2$$

$$c^2 = 6.25 + 16.81$$

$$c^2 = 23.06$$

$$c = 4.8 \text{ cm}$$

$$c^2 = a^2 + b^2$$

$$c^2 = 8^2 + 10^2$$

$$c^2 = 64 + 100$$

$$c^2 = 164$$

$$c = 12.8$$

Example #1

leg = 8 cm

leg = 7 cm

hypotenuse = ?

**Solve:**

$$c^2 = a^2 + b^2$$

$$c^2 = 7^2 + 8^2$$

$$c^2 = 49 + 64$$

$$c^2 = 113$$

$$\sqrt{c^2} = \sqrt{113}$$

$$c = 10.6$$

Short Side (Leg)

$$a^2 = c^2 - b^2$$

Let a be the one you are looking for:

$$\begin{aligned} a^2 &= c^2 - b^2 \\ a^2 &= 15.2^2 - 12.3^2 \\ a^2 &= 231.04 - 151.29 \\ \sqrt{a^2} &= \sqrt{79.75} \\ a &= 8.9 \end{aligned}$$

Real Life Square Roots!!

A ladder is 6.1 m long.

The distance from the base of the ladder to the wall is 1.5 m.

Calculate how far up the wall the ladder will reach.
