

Finding "k"

When given the value of the slope, you can find a missing value "k" in one or both of the co-ordinates

it is easy with the slope formula...

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

A line passes through the points $(2, k)$ and $(5, 7)$.
 If the slope is $\frac{2}{3}$, what is the value of k ?

Given:

$$x_1 = 2$$

$$y_1 = k$$

$$x_2 = 5$$

$$y_2 = 7$$

$$m = \frac{2}{3}$$

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

$$\frac{2}{3} = \frac{7 - k}{5 - 2}$$

$$\frac{2}{3} = \frac{7 - k}{3}$$

$$3(7 - k) = 2(3)$$

$$21 - 3k = 6$$

$$-3k = 6 - 21$$

$$\frac{-3k}{-3} = \frac{-15}{-3}$$

$$k = 5$$

A line passes through the points $(-7, -8)$ and $(k, -4)$. If the slope is $\underline{\underline{\frac{-4}{3}}}$, what is the value of k ?

Given:

$$x_1 = -7$$

$$y_1 = -8$$

$$x_2 = k$$

$$y_2 = -4$$

$$m = \frac{-4}{3}$$

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

$$\frac{-4}{3} = \frac{-4 - (-8)}{k - (-7)}$$

$$\frac{-4}{3} = \frac{4}{k+7}$$

$$-4(k+7) = 3(4)$$

$$-4k - 28 = 12$$

$$-4k = 12 + 28$$

$$\frac{-4k}{-4} = \frac{40}{-4}$$

$$k = -10$$

A line passes through the points $(2, k)$ and $(k, -3)$. If the slope is -2 , what is the value of k ?

Given:

$$x_1 = 2$$

$$y_1 = k$$

$$x_2 = k$$

$$y_2 = -3$$

$$m = \frac{-2}{1}$$

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

$$\frac{-2}{1} = \frac{-3 - k}{k - 2}$$

$$-2(k - 2) = 1(-3 - k)$$

$$-2k + 4 = -3 - k$$

$$-2k + k = -3 - 4$$

$$\frac{-k}{-1} = \frac{-7}{-1}$$

$$k = 7$$

A line passes through the points $(2k, 11)$ and $(k, k+3)$. If the slope is $\frac{3}{5}$, what is the value of k ?

Given:

$$x_1 = 2k$$

$$y_1 = 11$$

$$x_2 = k$$

$$y_2 = k+3$$

$$m = \frac{3}{5}$$

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

$$\frac{3}{5} = \frac{(k+3) - 11}{k - 2k}$$

$$\frac{3}{5} = \frac{k+3-11}{-k}$$

$$\frac{3}{5} = \frac{k-8}{-k}$$

$$3(-k) = 5(k-8)$$

$$-3k = 5k - 40$$

$$-3k - 5k = -40$$

$$\frac{-8k}{-8} = \frac{-40}{-8}$$

$$\boxed{k = 5}$$

$2k$	$k+3$
$2(5)$	$5+3$
<u>10</u>	<u>8</u>

Points: $(\underline{10}, 11)$
 $(\underline{5}, \underline{8})$
