

Word Problems

1. A local farm has 15 animals consisting of cows and chickens. Determine the number of each if there are 40 legs on the farm.

Substitution:

Let $x = \#$ of cows

Let $y = \#$ of chickens

$$\begin{aligned} x + y &= 15 & \rightarrow & \overset{-y}{x} + \overset{-y}{y} = 15 \\ 4x + 2y &= 40 & & \underline{x = 15 - y} \end{aligned}$$

$$(iii) \quad x = 15 - y$$

$$x = 15 - 10$$

$$\underline{x = 5}$$

$$(ii) \quad \begin{aligned} 4x + 2y &= 40 \\ 4(15 - y) + 2y &= 40 \end{aligned}$$

$$60 - 4y + 2y = 40$$

$$\begin{aligned} 60 - 2y &= 40 & -60 & -60 \\ -2y &= -20 & & \underline{-2} \\ y &= 10 \end{aligned}$$

(iv) There are
5 cows +
10 chickens

Elimination:

Let $x = \#$ of cows

Let $y = \#$ of chickens

$$\begin{aligned} x + y &= 15 & \rightarrow & \overset{\cdot 4}{x} + \overset{\cdot 4}{y} = \overset{\cdot 4}{60} \\ 4x + 2y &= 40 & \rightarrow & \overset{\cdot 1}{4x} + \overset{\cdot 1}{2y} = \overset{\cdot 1}{40} \end{aligned}$$

$$\begin{aligned} & & & \underline{2y = 20} \\ & & & \underline{2} \\ & & & y = 10 \end{aligned}$$

$$\begin{aligned} x + y &= 15 \\ x + 10 &= 15 & -10 & -10 \\ \underline{x = 5} & & & \end{aligned}$$

There are 5 cows and 10 chickens.

2. The next JMH play is called "The Love of Math". The tickets are \$5 for students and \$10 for adults. People are so excited that 261 tickets were sold in advance. How many student and adult tickets were sold if the total amount collected was \$1840.

Substitution:

Let $x =$ # of students

Let $y =$ # of adults

$$x + y = 261 \rightarrow \overset{(i)}{x + y = 261} \quad \overset{-y}{-y}$$

$$5x + 10y = 1840$$

$$\underline{x = 261 - y}$$

$$(ii) \ x = 261 - y$$

$$x = 261 - 107$$

$$x = 154$$

$$(iii) \ 5x + 10y = 1840$$

$$5(261 - y) + 10y = 1840$$

$$1305 - \underline{5y} + \underline{10y} = 1840$$

$$1305 + \underline{5y} = 1840$$

$$\underline{5y} = \underline{535}$$

$$\underline{y = 107}$$

(iv) There are
154 students
and 107 adults

Elimination:

Let $x =$ # of students

Let $y =$ # of adults

$$\overset{-5}{-5} \ x + \overset{-5}{-5} \ y = 261 \rightarrow -5x - 5y = -1305$$

$$5x + 10y = 1840 \rightarrow \overset{+}{+} \ 5x + 10y = 1840$$

$$\underline{5y} = \underline{535}$$

$$\underline{y = 107}$$

$$x + y = 261$$

$$x + 107 = 261$$

$$\underline{x = 154}$$

There are 154 students and 107 adults at the show

3. The admission fee at a small fair is \$1.50 for children and \$4.00 for adults. On a certain day, 2200 people enter the fair and \$5050 is collected. How many children and how many adults attended?

Substitution:

Let $x = \#$ of children

Let $y = \#$ of adults

$$x + y = 2200 \quad \rightarrow (i) \quad x = -y + 2200$$

$$1.5x + 4y = 5050 \quad (ii) \quad 1.5x + 4y = 5050$$

$$1.5(-y + 2200) + 4y = 5050$$

$$-1.5y + 3300 + 4y = 5050$$

$$2.5y + 3300 = 5050$$

$$\frac{2.5y}{2.5} = \frac{1750}{2.5}$$

$$y = 700$$

$$(iii) \quad x + y = 2200$$

$$x + 700 = 2200$$

$$x = 2200 - 700$$

$$x = 1500$$

(iv) 1500 children and 700 adults

Elimination:

Let $x = \#$ of children

Let $y = \#$ of adults

$$x + y = 2200 \quad \xrightarrow{-1.5 \quad -1.5} \quad -1.5x - 1.5y = -3300$$

$$1.50x + 4y = 5050 \quad (+) \quad 1.5x + 4y = 5050$$

$$\frac{2.5y}{2.5} = \frac{1750}{2.5}$$

$$y = 700$$

$$x + y = 2200$$

$$x + 700 = 2200$$

$$x = 1500$$

1500 children and 700 adults attended the fair.

4. Nigel has \$6000 to invest. His bank offers an interest rate of 9% on an ABC investment and 11% on the GTA investment. If he makes \$572 in interest, how much did he invest in each one?

Substitution:

Let x = investment in ABC (9%)

Let y = investment in GTA (11%)

$$x + y = 6000 \rightarrow \text{(i)} \quad x + y = 6000$$

$$0.09x + 0.11y = 572 \quad x = \underline{6000 - y}$$

$$\text{(iii)} \quad x = 6000 - y$$

$$x = 6000 - 1600$$

$$x = \underline{\underline{\$4400}}$$

$$\text{(ii)} \quad 0.09x + 0.11y = 572$$

$$0.09(6000 - y) + 0.11y = 572$$

$$540 - 0.09y + 0.11y = 572$$

$$\underline{0.02y} + 540 = 572$$

(iv) Nigel invested
\$4400 in ABC
and \$1600 in
GTA.

$$\underline{0.02y} = 32$$

$$0.02 \quad 0.02$$

$$\underline{\underline{y = \$1600}}$$

Homework

*Systems of Equations
Word Problems.*

1. Let B = bushes
 t = trees

$$\begin{array}{r} 13b + 4t = 487 \quad (1) \\ 6b + 2t = 232 \quad (2) \\ \hline 13b + 4t = 487 \quad (1) \\ \textcircled{2} \times -2 \quad -12b - 4t = -464 \quad (2) \\ \hline \end{array}$$

$(1) + (2) \quad b = 23 \quad (4)$

Sub (4) in (1)

$$\begin{array}{r} 13(23) + 4(t) = 487 \\ 299 + 4t = 487 \\ 4t = 487 - 299 \\ 4t = 188 \\ \frac{4}{4} \quad \frac{188}{4} \\ t = 47 \end{array}$$

Bushes cost *23

2. $x = 2$ point questions
 $y = 5$ point questions

$$\begin{array}{rcl} \text{total} & x + y = 50 & \textcircled{1} \\ \text{Value} & 2x + 5y = 145 & \textcircled{2} \\ \textcircled{1} \times -2 & -2x - 2y = -100 & \textcircled{3} \\ & \underline{2x + 5y = 145} & \textcircled{2} \\ \textcircled{3} + \textcircled{2} & \frac{3y}{3} = \frac{45}{3} & \\ & y = 15 & \textcircled{4} \\ \text{Sub } \textcircled{4} \text{ in } \textcircled{1} & x + 15 = 50 & \\ & x = 50 - 15 & \\ & x = 35 & \end{array}$$

There are 35 two point questions
15 five point questions

3. $x = 2$ point
 $y = 3$ point

$$\begin{array}{r} x + y = 37 \quad (1) \\ 2x + 3y = 80 \quad (2) \\ (1) \times -2 \quad -2x - 2y = -74 \quad (3) \\ \quad \quad \quad 2x + 3y = 80 \quad (2) \\ (3) + (2) \quad \quad \quad 1y = 6 \quad (4) \\ \text{sub (4) in (1)} \quad x + 6 = 37 \\ \quad \quad \quad x = 37 - 6 \\ \quad \quad \quad x = 31 \end{array}$$

The Lakers made 31 ~~two~~ two point baskets
and 6 ~~three~~ three point baskets.

$$4. \quad \begin{aligned} x &= T/F \text{ (3 points)} \\ y &= MC \text{ (11 each)} \end{aligned}$$

$$\begin{aligned} x + y &= 20 \quad (1) \\ 3x + 11y &= 100 \quad (2) \end{aligned}$$

$$\begin{aligned} (1) \times -3 & \quad -3x - 3y = -60 \quad (3) \\ (3) + (2) & \quad \frac{3x + 11y = 100}{8y = 40} \quad (2) \end{aligned}$$

$$\begin{aligned} \frac{8y}{8} &= \frac{40}{8} \quad (4) \\ y &= 5 \\ \text{sub (4) in (1)} \quad x + 5 &= 20 \\ x &= 20 - 5 \\ x &= 15 \end{aligned}$$

There are 5 multiple choice and 15 true false questions.

5. $x = \text{Waterslide}$
 $y = \text{Ferris Wheel}$

$$\begin{array}{r} 3x + 3y = 17.70 \quad (1) \\ 2x + 3y = 15.55 \quad (2) \\ \hline 3x + 3y = 17.70 \quad (1) \\ @x -1 \quad -2x - 3y = -15.55 \quad (3) \\ \hline (1) + (3) \quad x = 2.15 \quad (4) \end{array}$$

Sub (4) in (1)

$$\begin{array}{r} 3(2.15) + 3y = 17.70 \\ 6.45 + 3y = 17.70 \\ 3y = 17.70 - 6.45 \\ 3y = 11.25 \\ y = 3.75 \end{array}$$

Waterslide * 2.15
Ferris Wheel * 3.75

Ferris Wheel \$3.75

$$\begin{array}{r} 6. \quad 5x + 2y = 48 \quad (1) \\ \quad \quad 3x + 2y = 32 \quad (2) \\ \hline \quad \quad 5x + 2y = 48 \quad (1) \\ (2) \times -1 \quad -3x - 2y = -32 \quad (3) \\ \hline (1) + (3) \quad 2x = 16 \\ \quad \quad \quad x = 8 \quad (4) \end{array}$$

sub (4) in (1)

$$\begin{array}{r} 5(8) + 2y = 48 \\ 40 + 2y = 48 \\ 2y = 48 - 40 \\ 2y = 8 \\ y = 4 \end{array}$$

Adult ticket = \$8
Student ticket = \$4

7. $x = \text{children } \$1.50$
 $y = \text{adult } \$4.00$

$$\begin{array}{r} x + y = 2200 \quad (1) \\ 1.50x + 4y = 5050 \quad (2) \\ \textcircled{1} \times -4 \quad -4x - 4y = -8800 \quad (3) \\ \hline \textcircled{3} + \textcircled{2} \quad 2.50x \quad = -3750 \quad (4) \\ \hline x = 1500 \quad (4) \end{array}$$

sub (4) in (1) $1500 + y = 2200$
 $y = 2200 - 1500$
 $y = 700$

1500 student tickets
 700 adult tickets.
