

Final Space Question:

Imagine that you were given an endless supply of money and technology, design a **plan** for building a space colony on this planet that would allow at least six humans to survive for years, exploring and storing energy for their return trips to Earth. Write down **5 (five)** considerations you would have to make to live in space and describe how you may complete this.

You can write up your explanation or you can create a poster to draw and explain what your space colony would look like. Your 5 (five) considerations should be included in either format.

This is our last assignment for Science 9! I really wish we could have continued on in class together, but maybe someday we will get a chance to work together again 😊

Take care and have a safe and happy summer,

Mrs. McCallum
